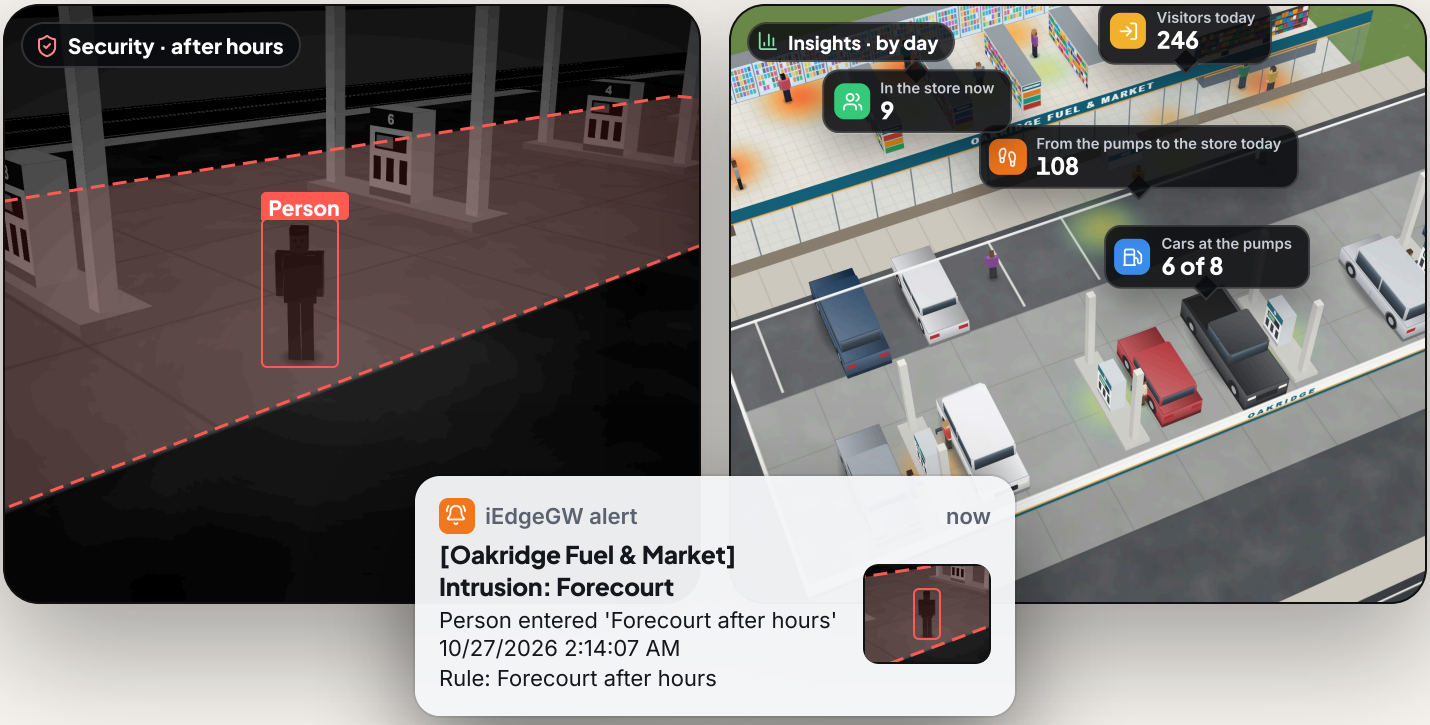
iLink Professionals Since 1994

iEdgeGW AI Analytics
Security alerts & business insights

AI on your own cameras

Safer nights.
Smarter days.

AI on the cameras you already have: an alert the moment something is wrong, and live answers about how your business runs. Use one, or both.



Security, Insights, or both: one gateway, the cameras you already have

Alerts that matter
Line crossing, intrusion and loitering on people and vehicles the AI finds, not on every movement.

On your phone
By WhatsApp or e-mail with the picture and a short clip, only at the hours you choose.

Know your traffic
People in the store now, visitors today, cars at the pumps, every hour compared.

See where people go
Heat maps and busy areas show which departments and aisles draw people in.

See it on your own cameras

Two ways your cameras work harder: use either, or both

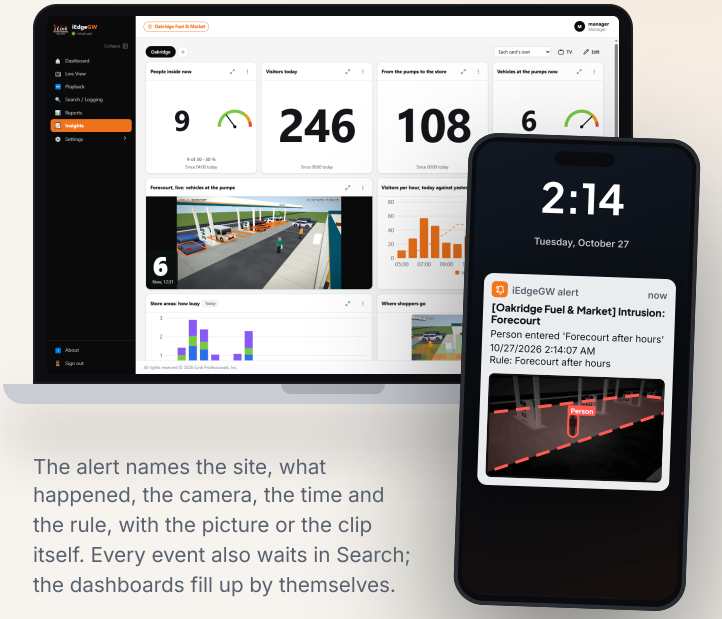
SECURITY

- Line crossing, intrusion, loitering, crowds, illegal parking, objects left or removed, fire and smoke
- People and vehicles told apart: person, car, truck, bus, motorcycle, bicycle
- Alerts by WhatsApp and e-mail with the picture, and a clip from just before
- Only when you want them: after hours, at night, on weekends, per alert type
- Your cameras' own alarms double-checked by the AI before you are told
- Every event kept and searchable with its picture and clip; copies to FTP or Google Drive
- Live View and your recorders' playback in a browser, on site or away

INSIGHTS

- People inside, visitors today, crossings of a line, free parking spaces, live
- Cars at each pump, how busy the pumps are, and walk-ins from the pumps
- Departments and aisles: how busy, how many visit, how long they stay
- Heat maps, the busiest hours of the week, any period against the one before
- A dashboard per location on a phone, a laptop or a TV; any chart as CSV

THE ALERT AND THE DASHBOARD



The alert names the site, what happened, the camera, the time and the rule, with the picture or the clip itself. Every event also waits in Search; the dashboards fill up by themselves.

For every place worth guarding and knowing

- **Gas stations & c-stores** — Pumps, store, after hours
- **Grocery & retail** — Visitors, departments, back doors
- **Restaurants & QSR** — Dining room, lot, after close
- **Malls & department stores** — Entrances, floors, busy hours
- **Warehouses & yards** — Fences, gates, docks at night
- **Parking & lots** — Free spaces, vehicles, loitering
- **Offices & venues** — Occupancy, entrances, after hours
- **Pharmacies** — Visitors and the back room
- **Franchises & chains** — One tab per location

Up and running in three steps

1. **Connect** — Your cameras and recorders connect to the gateway on site.
2. **Choose** — Draw what to guard, and the doors, pumps and aisles to count.
3. **Relax** — Alerts reach your phone; dashboards fill up by themselves.

The AI runs on the gateway on site; no monitoring service needed. Insights keeps counts, never who people are.
