iEdgeGW
Drive-Thru Speed of Service

Live · AI on site · No new lane hardware

Every car. Every second. Live.

Drive-thru speed of service, timed live by the cameras you already have.

The board on the kitchen TV

Serve more cars
See the line build and act before it backs up.

Find the bottleneck
Menu board, pay or window: know which one slows you down.

Coach with facts
Every car's time at every point, by daypart and by hour.

No new lane hardware
Uses your existing cameras. No ground loops, no headsets.

See it live on your own lane

iEdgeGW
Drive-Thru Speed of Service

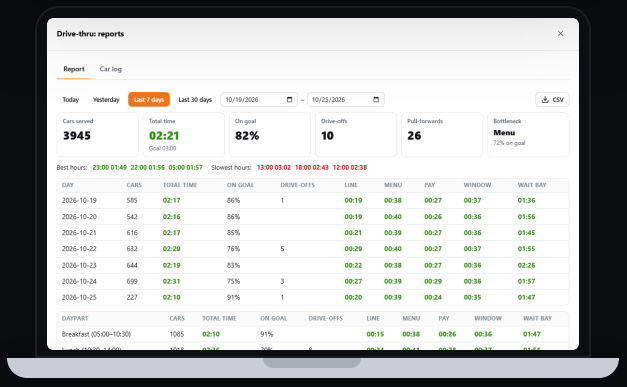

Everything your drive-thru needs to run faster

- A live lane board: every car drawn and timed from the line to the window
- Times at every point: line, menu board, pay and pickup windows, wait bay
- Your goals on every time: green, amber, red
- Up to three live cameras, each car's time over it on the video
- Single, tandem, side-by-side and dual lanes; one or two windows
- Cars in line, cars per hour, drive-offs, pull-forwards, the bottleneck
- Dayparts, on-goal streaks and the store's own leaderboard
- TV mode for the kitchen screen
- Alerts by pop-up, e-mail and WhatsApp
- Reports by day, daypart and hour, with the best and slowest hours
- A car log with a picture and a clip of every car at each stop
- Daily, weekly and monthly PDF reports by e-mail and WhatsApp

EACH CAR, TIMED ON THE VIDEO

REPORTS THAT RUN YOUR SHIFTS

Fits your drive-thru

Single lane
Pay window, then pickup

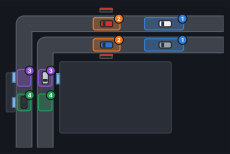

One window
Pay and pick up together

Tandem menus
Two boards, one lane

Side-by-side
Two menus merge (Y)

Dual lanes
Two complete lanes

Up and running in three steps

1. **Connect**
   Your IP cameras and recorders connect to the iEdgeGW gateway in the store.
2. **Draw**
   Mark the line, the menu board, pay and pickup on each camera's picture, in minutes.
3. **Run faster**
   Every car is timed live on the board; alerts and reports follow by themselves.

The AI runs in the store, on the iEdgeGW gateway: video is analysed on site, not in the cloud.
